PileSafe WIRELESS E-Stop System

PileSafe provides a continuously monitored, wireless communication link between the RTU located in mobile equipment operating on the stockpile and the CPU which is attached to the plant control system. Should an event arise where the mobile equipment falls into the feeder draw cavity, the wireless link will be broken activating the Emergency Stop just as if the operator had hit the E-Stop on the RTU.

Protect your most valuable asset, your people! When accidents occur, every second counts. The PileSafe system leverages the latest in wireless communications technology to ensure that the underground feeders stop when circumstances require swift, decisive action. When seconds count, you can count on PileSafe!

SYSTEM FEATURES

In-Cab E-Stop Push Button

Loss of Signal "Fail Safe" E-Stop

No Configuration Required

Simple Activate/Deactivate

Built-in System Test Functions
